Response to Amendment

1. This action is responsive to amendment received on Sep. 1, 2005. Claims 1, 11, 21 and 31 were amended. Claims 1-38 are pending examination.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-38 are rejected under 35 U.S.C. 102(e) as being anticipated by Goshey et al., U.S. Patent No. 6,101,555 (referred to hereafter as Goshey).

Goshey teaches the invention explicitly as claimed including a system and method for sharing peripheral devices over a network where a client can send a request to a host to detect the connected peripheral devices (see abstract).

As to claims 1, 11, 21 and 31, Goshey teaches a method and system for detecting devices connected to a network comprising:

sending a scan request to a remote command process running on a remote network host (see col. 6 lines 17-37, the client sends a scan request to identify the peripheral devices connected to the host);

scanning the network host with the remote command process to identify devices are connected to the host (see col. 6 lines 38-65, the host is scanned for the connected devices); and

receiving a response to the scan request from the remote command process that indicates whether a device is connected to the network host (see col. 6 lines 38-65, a list of peripheral devices connected to the host is displayed to the client).

As to claim 2, 12 and 22, Goshey teaches the method and system of claims 1, 11 and 21 respectively wherein a controller process is used to send the scan request to the remote command process (see col. 6 lines 38-65).

As to claim 3, 13 and 23, Goshey teaches the method and system of claims 2, 11 and 21 respectively wherein the controller process runs on a network host (see col. 6 lines 38-65).

As to claim 4, 14 and 24, Goshey teaches the method and system of claims 1, 11 and 21 respectively wherein scanning the network host with the remote command process comprises sending a scan request from the remote command process to a host application program interface (see col. 6 lines 38-65).

As to claims 5, 15, and 25 Goshey teaches the method and system of claims 1, 11 and 21 respectively receiving device addresses from the application program interface (see fig. 2D).

As to claim 6, 16 and 26, Goshey teaches the method and system of claims 1, 11 and 21 respectively further comprising maintaining an updated list of each network host running a remote command process with a host lookup process (see Fig. 2D).

As to claim 7, 17 and 27, Goshey teaches the method and system of claims 6, 11 and 21 respectively further comprising consulting the list prior to sending the scan request (see col. 11 lines 57-col. 12 lines 12).

As to claim 8, 18 and 28, Goshey teaches the method and system of claims 1, 11 and 21 respectively further comprising sending multiple scan requests to multiple remote command processes stored on network hosts (see col. 6 lines 38-65).

As to claim 9, 19 and 29, Goshey teaches the method and system of claims 8, 11 and 21 respectively wherein the scan requests are sent in parallel (see col. 6 lines 38-65).

As to claim 10, 20 and 30, Goshey teaches the method and system of claims 1, 11 and 21 respectively further comprising communicating information concerning the detected devices to a user (see col. 6 lines 38-65).

As to claim 32, Goshey teaches the system of claim 31 further comprising a host lookup that maintains an updated list of every network host that is running a remote command process (see col. 6 lines 38-65).

As to claim 33, Goshey teaches the system of claim 32 wherein the host lookup process runs on the first network host (see col. 6 lines 38-65).

As to claim 34, Goshey teaches the system of claim 32 wherein the host lookup process runs on a third network host (see col. 6 lines 38-65).

As to claims 35-38, Goshey teaches the method and system of claims 1, 11, 21 and 31, where the peripheral devices comprise at least one of a disk drive, a tape drive, a tape library and a modem (see col. 1 lines 60-col. 2 lines 2).

Response to Arguments

3. Applicant's arguments with respect to the pending claims have been considered but are moot in view of the new grounds of rejection.

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
